# Storage containers and technical rooms

At Eurotherm **we produce fully bespoke** storage containers and technical rooms that comply with regulatory and environmental standards.

The containers are **designed** and built **according to your specific needs**, the products to be stored and the place where they will be installed, to meet any dimensional and accessory customization needs, **suitable not only for storing paints but also for their preparation** and cleaning of paint guns, with the aim of creating a **human-scale work environment**.

## Storage Container

Our storage containers were born from the **need to store paints, thinners, solvents, oil**, etc, which in the event of accidental spillage can cause damage to the environment.

**Premium features** as standard supply:

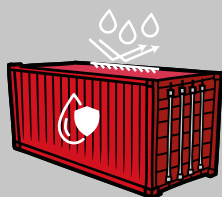

- High thermal insulation
- Spill-proof liquid containment tank
- Forced air exchange
- Customized internal shelving

## Technical rooms

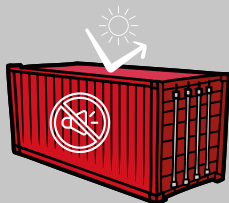

Using the **same construction and safety model as storage containers**, they raise the standards, ensuring a comfortable and safe environment for the personnel who must operate inside.

This type of premises **satisfies multiple needs**:

- Ensure a suitable environment for mixing the different chemicals
- Wash the guns and components of the liquid paint system
- Store moderate quantities of paints for everyday use

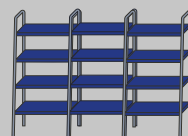

→ Weatherproof construction for outdoors

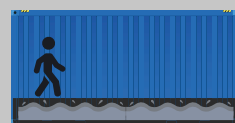

→ Thermal insulation

→ Forced air exchange

→ Internal shelving

→ Liquid containment tank

Since 1958 we have been manufacturing customised systems to meet the painting needs of any company: from small businesses to large industries.

For the international market we design, build and install painting systems, overseeing every phase of the industrial process.

From pre-treatment operations, such as washing and shot blasting, to the final finishing process: **the Eurotherm systems apply the most efficient and technological processes, to ensure a constant high-level result.**
